Commitment to achieving Net Zero

Eco Approach is committed to achieving Net Zero greenhouse gas emissions across its UK operations by 2040.

Policy Number: EA-HS-OD-CRP-A	Revised By: Lee Howard
Approved By: Jason Case	Last Review Date: 25/06/2026

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2025	
Additional Details relating to the Baseline Emissions calculations.	
<p>The 2025 reporting year has been adopted as Eco Approach Ltd's baseline year, representing the first complete organisational greenhouse gas inventory prepared in accordance with the PPN 06/21 Technical Standard, the GHG Protocol Corporate Standard and the UK Government Environmental Reporting Guidelines. The baseline includes Scope 1 and Scope 2 emissions together with the required subset of Scope 3 emissions relevant to the organisation's operations, including business travel, employee commuting, waste generated in operations and upstream transportation where applicable. Emissions have been calculated using the latest UK Government greenhouse gas conversion factors available at the time of reporting. Where complete activity data was unavailable, reasonable estimates and proxy data have been applied and documented within the accompanying assumptions and evidence registers. This baseline provides the reference point against which future carbon reduction performance and Net Zero progress will be measured.</p>	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	537.93
Scope 2	11.20
Scope 3 (Included Sources)	64.16
Total Emissions	613.29

Current Emissions Reporting

Reporting Year: 2025		
Additional Details relating to the Current Emissions calculations.		
As 2025 represents Eco Approach Ltd's baseline reporting year, no measurable reduction against the baseline has yet been achieved. The initiatives described above establish the governance, management systems and operational controls that will support the organisation in achieving its projected reduction of 233.29 tCO ₂ e (approximately 38%) by 2030 and Net Zero emissions by 2040. These measures will remain in effect when performing public sector contracts		
EMISSIONS	TOTAL (tCO₂e)	
Scope 1	537.93	
Scope 2	11.20	
Scope 3 (Included Sources)	Scope 3 Category	tCO₂e
	Business Travel (including accommodation)	39.95
	Employee Commuting	12.45
	Waste Generated in Operations	11.76
	Upstream Transportation & Distribution	0
	Downstream Transportation & Distribution	0
	Total Scope 3	64.16
Total Emissions	613.29	

In order to achieve Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 380.00 tCO₂e by 2030. This is a reduction of 38% against the 2025 baseline

Policy Number: EA-HS-OD-CRP-A	Revised By: Lee Howard
Approved By: Jason Case	Last Review Date: 25/06/2026

Carbon Reduction: Projected vs. Actual

Year	2025 (Baseline)	2026	2027	2028	2030	2035	2040 (Net Zero)
Target Emissions (tCO ₂ e)	613.29	560.00	510.00	470.00	380.00	250.00	150.00
Actual Emissions (tCO ₂ e)	613.29	-	-	-	-	-	-
Carbon Removals / Offsets (tCO ₂ e)	0	0	0	0	20	80	150
Net Emissions (tCO ₂ e)	613.29	560.00	510.00	470.00	360.00	170.00	0.00

Residual emissions remaining after implementation of all reasonably practicable reduction measures will be neutralised through verified carbon removal projects in order to achieve Net Zero by 2040.

Carbon Reduction Projects

Since establishing our 2025 baseline, Eco Approach Ltd has implemented a number of environmental management measures to improve the monitoring, management and reduction of greenhouse gas emissions across the business. These measures form part of our wider Carbon Reduction Plan and will continue to be applied when delivering public sector contracts.

Key initiatives implemented include:

- Completion of the organisation's first comprehensive greenhouse gas inventory covering Scope 1, Scope 2 and the required Scope 3 emissions in accordance with the GHG Protocol and PPN 06/21 reporting requirements
- Establishment of a formal Carbon Reduction Plan with a commitment to reduce gross greenhouse gas emissions by approximately 38% by 2030 and achieve Net Zero emissions by 2040

Policy Number: EA-HS-OD-CRP-A	Revised By: Lee Howard
Approved By: Jason Case	Last Review Date: 25/06/2026

- Introduction of energy monitoring arrangements and the assessment of energy efficiency opportunities, including LED lighting upgrades, improved HVAC efficiency and the evaluation of renewable electricity procurement.
- Increased use of digital systems and electronic documentation to reduce paper consumption and minimise operational waste
- Incorporation of sustainability considerations into supplier engagement, encouraging the procurement of lower-carbon products and services and supporting the use of recycled and sustainable materials where practicable
- Continued promotion of sustainable travel through journey planning, remote meetings where appropriate and consideration of lower-emission transport options to reduce business travel emissions
- Establishment of annual monitoring and reporting arrangements to review progress against carbon reduction objectives and identify opportunities for continual improvement.

As 2025 represents Eco Approach Ltd's baseline reporting year, no measurable reduction against the baseline has yet been achieved. The initiatives described above establish the governance, management systems and operational controls that will support the organisation in achieving its projected reduction of 233.29 tCO₂e (approximately 38%) by 2030 and Net Zero emissions by 2040. These measures will remain in effect when performing public sector contracts.

Future initiatives

Eco Approach Ltd intends to implement the following additional carbon reduction initiatives over the next five years:

- Procurement of renewable electricity where practicable
- Progressive transition towards lower-emission and electric vehicles
- Improved journey planning and increased use of remote meetings
- Supplier engagement to improve Scope 3 emissions reporting
- Ongoing energy efficiency improvements across office operations
- Annual review of emissions data and carbon reduction targets
- Procurement of verified carbon removals to neutralise residual emissions as the organisation progresses towards Net Zero by 2040.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard

This Carbon Reduction Plan has been reviewed and signed off by the board of directors

Signed on behalf of the Supplier: Eco Approach
